

## Planar Systems PD7060 Home Theater Projector

Most of us know Planar Systems for their many video devices outside the AV arena such as their computer monitors. Your client might be relatively unaware of their remarkable array of products such as; high resolution medical monitors used in surgery and MRI, rugged video displays for military use such as fighter plane targeting screens, tank navigation and sighting displays, and outdoor high resolution displays such as large venue TV or the small screens that work in all kinds of weather like the ones in gas station fill pumps. The new line of video displays in their AV line up is just as remarkable. A great example is the PD7060. This DLP Dark Chip 3 equipped projector is shaking the foundations of many competitors.

With it's 3500:1 contrast ratio, 1,000 lumens, and a native 720p HD resolution, the Planar PD7060 endows every projected image with a lush, detailed realism. It delivers solid performance and has the bonus of a great deal of connectivity, The DarkChip technology combined with serious scaling technology reveals a dramatic image.

**Inputs include:**

HDMI

DVI

Component

RGB

Composite

S-Video

Planar brings almost 25 years of technological virtuosity to a specialty line of home theater projectors. Designed for the moviephile's sharp and judicious eye, four projectors offer up a multi-talented range of designs, lumens, and contrast ratios. Available exclusively through specialty home theater partners worldwide, Planar's projectors were designed with your exact needs in mind. To be reminded that dreams really do come true, just turn one on.
