

Zemi Designed And Crafted For Beauty And Performance

NACSound is a highly revered Italian manufacturer of quality loudspeakers specializing in omni-directional, ceramic loudspeakers that furnish rather than disfigure a room without sacrificing quality sound reproduction. Their omni-directional technology offers an exceptional sound quality no matter where the speakers are placed. Each NACSound speaker is created by top designers, the design is exclusive and unique. The enamelled porcelain encasing the speakers aside from having amazing acoustical properties is attractive and keeps its shape over time guaranteeing a superior sound quality and pleasing the eye.

NACSound' Zemi offers much versatility - the speakers can be suspended from the ceiling or placed on any surface. The speakers are individually handmade ensuring fine attention to detail. The Zemi employs Multi-directional NACSound technology (a tweeter-woofer configuration that maximizes sound production and clarity). It is available in both hanging and free standing versions.

The finishes are many and can be viewed by clicking [here](#). Each finish is unique to itself, no two are exactly alike. Created by artisans, each Zemi is a work of art as well as a finely tuned reproducer. Imagine your client's enjoyment of Zemi as they listen effortlessly while knowing that their system is unique to their home.

Technically the Zemi features a fast 1.1" silk dome tweeter with a 5.7" high excursion woofer. The Zemi responds faithfully beyond audibility and down to 40 Hz.
